# Problem Statement

Many students struggle to present their skills, achievements, and certificates in a professional, structured way. Traditional resumes are static and do not showcase projects, certificates, or interactive features. A portfolio website solves this by being dynamic, engaging, and always accessible.

---

# Project overview

Your project is a personal portfolio website created with HTML, CSS, and JavaScript. It highlights your profile, education, skills, certificates, projects, and resume. The design is responsive, so it works on mobile and desktop.

# End users

Students – to showcase their learning journey.

Recruiters/HR – to evaluate skills and certificates easily.

College Placement Teams – to use during campus placements.

General Viewers – anyone who wants to know your academic and project background.

---

# Tools and Technologies

HTML5 → Structure of the website.

CSS3 → Styling, layout, responsive design.

JavaScript → Interactivity (smooth scroll, hover effects).

VS Code → Coding environment.

GitHub Pages → Hosting platform.

---

# Portfolio Design and Layout

Clean and minimal design with a dark header and blue highlight color.

Organized into sections: About, Education, Certificates, Projects, Skills, Resume, Contact.

Certificates are displayed with styling (borders, shadows).

Profile picture styled as a circle with a border.

Navigation menu links smoothly scroll to each section.

---

# Features and Functionality

Responsive design for all devices.

Interactive navigation menu with hover effects.

Downloadable resume button.

Certificate images displayed neatly.

Contact section with clickable email and phone number.

Social links can also be integrated later (LinkedIn, GitHub).

---
